Monthly commentary

In January 2025, the global bond market was notably volatile with a sharp rise in yields in the first half of the month, almost completely erased in the second part of the month. The move up was partly due to waning expectations for U.S. rate cuts following strong economic data, including a robust jobs report. But the market stayed focused on Trump policy announcements, with fears of inflation linked to tariffs, fiscal policy expectations and immigration measures all affecting yields. Yields also stay under pressure from elevated US debt issuance. As a result, 10y US yields rose by 16 basis points in the first week, after a 69 basis point rise in 2024.

Global central banks have reacted diversely; the Federal Reserve held rates steady at 4.25-4.50% despite Trump's push for lower rates, signalling stability in unemployment but noting persistent inflation. The ECB cut rates by 25 basis points to 2.75% to address slowing growth and disinflation, while the Bank of Canada also reduced rates by 25bps, citing U.S. tariff risks. Conversely, the Bank of Japan raised rates to 0.50% to manage a 3.6% inflation rate and accelerating wages.

Economic indicators showed December U.S. Nonfarm Payrolls at 256,000 (versus a forecast of 163,000), pushing yields up, but a slightly lower core CPI December print (3.2% yoy vs 3.3% expected), calmed down the market from the middle of the month. Eurozone's Q4 GDP growth was a disappointing 0.9% yoy, with Germany and France underperforming.

U.S. 10-year yields reached 4.80% before coming back down to 4.54%, European yields and UK gilts followed the move and Japan's 10-year JGB yield hit a 10-year peak at 1.25%. Corporate bonds saw spreads tighten to near-decade lows at 84bps for IG issuers, with European and British spreads tightening the most. In Emerging Markets, returns were positive, with Brazil raising rates by 100bps to fight inflation, leading to a stronger BRL and recovery in its bond market.

Over the month of January 2025, active modified duration positions relative to the JPM GBI Global have been implemented within the investible universe. Globally, the aggregate sum of the active modified duration positions resulted in an overall overweight stance. The headline duration position had a slight negative contribution to portfolio relative returns.

Currency bloc opportunities to overweight modified duration were identified on Australian, European and Japanese government bond markets. Conversely, opportunities to underweight

modified duration were spotted on the US, Canadian and UK markets. The Danish, Swedish positions were kept flattish relative to benchmark at a country level. In total, currency bloc strategies had a negative contribution to portfolio relative returns with negative contributions across the major positions.

Regarding country strategies, the EMU modified duration resulted in a net/aggregate long position for the bloc, whilst keeping a modest long modified duration position on Germany and underweight France with Belgium flattish versus benchmark. We kept overweight positions on Italy and Spain in the periphery.

In this context, the intra-EMU country spread positions were a slight positive. In total, the yield curve contribution had a slight positive impact.
