A.I. MACHINES GLOBAL MANAGED RISK ("AIM GMR")

MONTHLY REPORT (FACTSHEET)
31 DEC 2025
GBP (I2 GBP Hedged Inc - ISIN: IE00B94Q3N08)

FIRM

A.I. Machines: We are a London-based independent financial technology firm pioneering AI-powered investment strategies.

Our Mission: To smooth investment journeys and enhance outcomes over a market cycle, through smarter, faster, unemotional and unbiased decision-making by AI - offering real diversification to existing human portfolio manager and strategy risks.

Our Brainchild: PIE™ (Predictive Investment Engine) is our proprietary AI powerhouse, operating for over a decade. It is self-learning and fully automates the entire portfolio- and risk management process.

Our Team: We combine decades of expertise in finance, computer science, natural sciences, and AI.

FUND PURPOSE

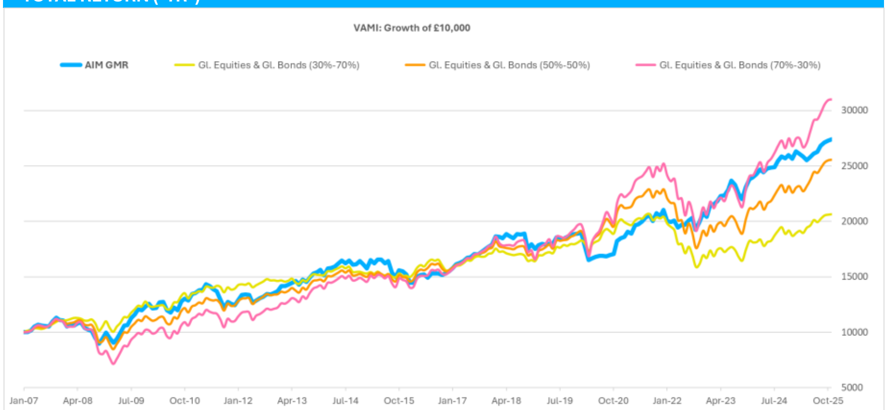
Over a full market cycle, the Fund aims to provide **a 4-in-1 core portfolio diversifier, offering multiple suitability criteria** that can be matched across the investor risk-profile spectrum via a single fund with a:

1. **Similar** Total Return **(Outcome)** profile **to Aggressive/Growth funds**
2. **Similar** Standard Deviation **(Tolerance-To-Risk)** profile **to Balanced/Moderate funds**
3. **Similar** Maximum Drawdown **(Capacity-For-Loss)** profile **to Cautious/Conservative funds**
4. **Shorter** Drawdown Duration **(Time-In-Loss)** profile **than Aggressive, Balanced and Cautious funds**

FUND HIGHLIGHTS

- **Next-generation Global Tactical Asset Allocation strategy**
- **100% powered by Artificial Intelligence (AI)**
- Operating without emotion or behavioural bias
- Longest fully AI-powered fund track record in the world
- Diversifying your existing human portfolio manager- and strategic asset allocation risks
- Simple portfolio requiring only 2 asset classes & 3 instruments **(Passive Index Equities and Cash)**
- Tactically able to move global equity (MSCI World) exposure between 10-90% weekly
- No direct risk of a bond, property or commodity bear market
- No direct liquidity, leverage or currency risks

TOTAL RETURN ("TR")



Source: *A.I. Machines and Northern Trust.* ***Basis:*** *NAV based, total return, net of fees in GBP Hedged.* ***Period:*** *AIM GMR Since Strategy Inception on 31.01.2007 to date.*
Global Equities: *iShares MSCI World UCITS ETF (IWRD) - 31.01.2007 to date.*
Global Bonds: *iShares 7–10 Year Treasury Bond ETF (IEF) - 31.01.2007 to 31.03.2009, followed by iShares Global Government Bond UCITS ETF (IGLO) from 01.04.2009 to date.*

PERFORMANCE INFORMATION

Source: *A.I. Machines and Northern Trust.* ***Basis:*** *NAV based, total return, net of fees in GBP Hedged.* ***Period:*** ****SSI*** *(Since Strategy Inception) on 31.01.2007 to date.*
Performance from 31.05.2017 to date is 100% powered by A.I. Machines' artificial intelligence investment engine.
Please note: The Fund's mandate allows for tactical global equity index (MSCI World) exposure ranging from as little as 10% to as much as 90% on a weekly basis. Therefore, from time-to-time, investors may be under or over-exposed to equity markets vs. its typical Cautious (30%), Balanced (50%) or Aggressive (70%) portfolio peers.
Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.

A.I. Machines Global Managed Risk Fund (“AIM GMR” - I2 GBP Hedged Inc - ISIN: IE00B94Q3N08) – 31 DEC 2025

GLOSSARY

Standard Deviation (Aka Volatility): Indicates a fund’s return volatility over a specific period. It tells you how much the fund's returns deviate from its average (mean) return and is commonly used as a basic measure of risk. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility.
Sharpe Ratio: Shows how much return a fund provides you for the risk taken. A higher Sharpe Ratio means better risk-adjusted performance—more reward for each unit of risk (in Volatility terms) taken.
Downside Deviation: Measures the volatility of a fund’s negative returns only, showing how much returns fall below a minimum acceptable rate, helping investors assess downside risk more precisely than standard deviation.
Sortino Ratio: Shows how much return a fund gives you for the downside risk you take. Unlike the Sharpe ratio, it only counts bad (downside) volatility, making it more focused on protecting losses.
Maximum Drawdown: Shows the biggest drop a fund has had from a peak to a low. It tells you the worst loss investors faced before the fund started recovering.
Maximum Drawdown Recovery Speed: Show how fast the fund recovered from its worst (Maximum) drawdown, back to its previous peak.
Maximum Drawdown Duration: Shows how long investors waited to break even from the fund’s highest NAV before it experience its largest drawdown and back to its previous high peak again.
Longest Drawdown Duration: Shows the longest period a fund stayed below its previous peak. It shows how long an investor waited to recover losses and return to their former highest NAV.
Average of All Drawdowns: Measures the average decline from a peak to a subsequent trough across all drawdown events.
Average Drawdown Duration: Average number of time periods (e.g., months) it takes for a portfolio to recover from each drawdown.
Ulcer Index Ratio: It's used to evaluate how well an investment delivers returns relative to the depth and duration of drawdowns. A higher Ulcer Index Ratio indicates more efficient performance per unit of downside risk, as it reflects greater returns relative to the depth and duration of drawdowns.
NAV (Net Asset Value): Is the price per specific share of a fund. It’s calculated by dividing the fund’s total assets minus liabilities by the number of shares, showing what each unit is worth.
AMC (Annual Management Charge): Is the yearly fee an Investment Manager charges for managing your money. It’s taken as a percentage of your investment and includes things like research and portfolio management.
TER (Total Expense Ratio): Shows the total annual cost of running a fund, expressed as a percentage of assets. It includes management fees and other expenses, helping investors understand what they’re paying to invest.
OCF (Ongoing Charges Figure): Shows a comprehensive annual cost of investing in a fund, including management, admin, etc. fees. It helps investors understand how much is deducted from returns to cover running the fund.
YTD (Year to Date): Shows how much a fund has gained or lost since the start of the current calendar year. It helps investors see recent performance up to the current reporting date.
Short Future: It's a financial derivate instrument used to profit from or protect a portfolio against negative market movements. The fund profits if prices drop, helping hedge risk or take advantage of downturns.
Currency Hedge: A strategy using derivatives to reduce currency risk. It aims to protect investors from losses caused by exchange rate movements between the fund’s base currency and an investor’s share class currency.
Net Equity Exposure: Shows how much of a fund’s value is invested in equities after subtracting any short positions. It tells you the fund’s overall exposure to the ups and downs of the stock market.
Reporting Status (UK): Granted by the UK's HMRC (Her Majesty’s Revenue & Customs) to offshore funds that meet certain transparency and reporting requirements. If a fund has reporting status, UK investors may benefit from more favourable capital gains tax treatment when they dispose of their fund holdings.
SFDR (Sustainable Finance Disclosure Regulation): IEU rule requiring funds to show how they consider environmental, social, and governance (ESG) factors, helping to understand a fund’s sustainability objectives.
Article 6 (under SFDR): Funds that do not promote ESG characteristics or sustainability objectives specifically. They may consider ESG risks, but their main goal is financial performance.
